

I am writing to voice my opinion about the combination of towers and migratory birds and how they don't mix. I would like you to take into consideration the following points: begin a systematic review of communication tower and bird mortality issues;

- institute a research program, funded by the communications industry, to identify tower placement, design and lighting conditions that result in bird mortality;
- undertake environmental reviews of all existing towers to assess their placement and design with regard to migratory bird impacts;
- require that all proposed towers be subjected to rigorous environmental reviews;
- and implement immediate protections based on existing knowledge, such as the voluntary tower siting and placement guidelines developed by the U.S. Fish and Wildlife Service.

Thank you for your time on this important issue and I hope there can be something done for the birds that don't interfere with you.
